Exercise Pro licensing options:

A single copy of Exercise Pro can be installed on a single computer and can be accessed by as many clinicians as needed. If needing to install on multiple computers that are not networked, then a single copy must be purchased for each computer. If the computers are part of a local area network and are accessed at the same physical location, the basic 5 concurrent license network system can be purchased. This means that all the computers on the network can access Exercise Pro and 5 can be open at the same time. Additional licenses can be added to the system. For networking between different physical locations, additional charges may be incurred – call for specific quote.

When purchasing Exercise Pro, it is NOT necessary to buy any Exercise Expert add-on modules as Exercise Pro is a complete system.

Ergo Pro licensing:

Each Ergo Pro disk allows the installation of one copy on one computer. Network systems are available if needed. Call for quotes and details.

System Requirements:

- Pentium 3 or better processor
 - 64 megabytes or more of memory
 - 75 megabytes of free disk space
 - CD ROM drive
 - Microsoft Windows 98, ME, 2000, 2003, NT, XP or Vista
 - At Least 800x600 Resolution
 - Ink or Laser Jet Printer
- (See www.BioExSystems.com for network specifications)

Personal Training, Nutritionist and Dietitian Software Products.

* Base program required to run add-on modules

Subtotal (add to other side)

** Requires Nutrition Maker, Fitness Maker Professional, Nutrition Maker Focus, or Nutrition Maker Plus to run Meal Plans

Exercise Expert licensing:

Exercise Expert is only available as a single computer install and can be accessed by as many trainers as needed. For multiple computer installs, separate copies must be purchased. Call for multiple purchase discount price quotes.

“Maker” licensing:

The basic Maker products (Fitness Maker, Nutrition Maker, Fitness Maker Pro, Nutrition Maker Focus, Nutrition Maker Plus and Management Maker) are licensed for one computer and one trainer and allow entry of unlimited clients. To allow more than one user to login, additional trainer licenses must be purchased. For installation on multiple computers, separate copies must be purchased and there may be data transfer considerations. For multiple computer installations, purchase the network packages to allow proper access of client data between the computers.
